#### **1.0 REGULATORY AUTHORITY**

California Code of Regulations, Title 8 sections 332.2, 332.3, 3203, 3362, 5141 through 5143, 5155, and 14301. This regulation provides guidelines for the protection of employees and for addressing employee related concerns to indoor air quality (IAQ).

## 2.0 PURPOSE

The purpose of this program is to establish a uniform set of guidelines for maintaining the quality of indoor air in all campus buildings. Through the collaborative efforts of Environmental Health and Safety, Facilities Management, and Human Resources, indoor air quality shall be maintained through preventative and responsive measures. Preventive approaches include periodic inspections, preventive maintenance, and plan review. Responsive approaches shall include a mechanism for complaint response, analytical monitoring and implementation of corrective actions. This program also designates departmental responsibility for ensuring the completion of programatical elements and will incorporate other programs that concern specific IAQ issues.

### 3.0 SCOPE

This program shall include all CSU East Bay structures, including leased structures, and apply to all CSU East Bay employees. Response and improvement duties of this program rest with Environmental Health and Safety and Facilities Management. However, it is the responsibility of all employees to report IAQ deficiencies and complaints to their supervisor or Environmental Health and Safety.

## 4.0 **RESPONSIBILITIES**

#### 4.1 Department of Environmental Health and Safety

- 4.1.1 Develop and maintain the campus Indoor Air Quality program. Make copies of the written program available to affected departments.
- 4.1.2 Provide assistance to individual departments concerning implementation of the program.
- 4.1.3 Respond to complaints concerning the quality of indoor air. Coordinate analytical testing and monitoring of indoor air if warranted by conditions.
- 4.1.4 Maintain record of employee/occupant complaints related to indoor air quality.

4.1.5 Coordinate mitigation efforts of conditions which may impact indoor air quality.

# 4.2 Department of Facilities Management

products. For instance, interior paints are now available that are water based and emit very low VOCs. If possible, source removal would ensure the improvement of indoor air quality. Source removal is required in the event of a spill or release. Office furnishings and carpet should be offgassed out-of-doors prior to installation and placement to reduce the concentration of off-gassed products after installation. Off-gas time is dependent on the size and type of furnishing. Once carpet is installed, 100% outside air supplied by the affected building's HVAC system should be used to remove remaining VOCs.

### 5.2 Biological Agents

5.2.1 Sources

Biological agents can create a complex mixture of indoor air pollutants. The scope of biological agents includes: viruses, bacteria, fungi, protozoa, arthropods, and mammals. Biological agents in indoor air are known to cause four types of human disease: infections, where living organisms penetrate and grow in human tissue (e.g., Legionnaires' disease); allergic or hypersensitivity diseases (e.g., hay fever, asthma); toxicoses (e.g., endotoxins) and irritant effects from compounds released from biological growth.

irritation and microbiological growth. Adjustments shall be made to HVAC system if humidity monitoring results are not within the previously described range.

# **APPENDIX A**

Examples of typical indoor air contaminants and their sources

## Table 6.1

| Contaminant<br>Carbon Monoxide | Health Effects<br>Nausea, headaches, visual disturbances,<br>brain damage, angina                              | Sources<br>Automobile exhaust;<br>improperly vented stoves,<br>hot water heaters, and<br>furnaces. |
|--------------------------------|--|--|
| Formaldehyde                   | Mucous membrane irritation, fatigue, skin rash, and cancer in high exposures.                                  | Particle board; plywood;<br>adhesives in office<br>furnishings and carpets; and<br>tobacco smoke   |
| Ozone                          | Upper respiratory irritation; dry eyes   | Copiers; laser printers; air ionizers  |
| Organic Vapors                 | Upper respiratory irritation; fatigue and<br>nausea; long term exposures result in liver<br>and kidney damage. | Paints, solvents, disinfectants and plastics   |
| Asbestos                       | Asbestosis (lung tissue damage);<br>mesothelioma (cancer of peritoneal lining);<br>lung cancer.                | Insulation; ceiling and floor tiles  |
| Dusts                          | Upper respiratory irritation; dry throat; rhinitis.  | Various  |
| Carbon Dioxide                 | Fatigue and malaise; shortness of breath   | Bioeffluents; poor HVAC operation.   |

# APPENDIX B Contaminant Source and PEL

| Contaminant     | Sources                         | Permissible Exposure Limit (PEL) |
|-----------------|---------------------------------|----------------------------------|
|                 |                                 |                                  |
| Carbon Monoxide | Automobile exhaust:             | OSHA 8 hr 35 ppm                 |
|                 | improperly vented stoves, hot   | OSHA ceiling limit - 200 ppm     |
|                 | water heaters, and furnaces.    |                                  |
| Formaldehyde    | Particle board; plywood;        | OSHA 8 hr 0.75 ppm               |
|                 | adhesives in office furnishings | OSHA 15 min - 2 ppm              |
|                 | and carpets; and tobacco smoke  |                                  |
| Ozone           | Conjers: laser printers: air    | OSHA 8 hr = 0.1 nnm              |

|                | and carpets; and tobacco smoke  |                               |
|----------------|---------------------------------|-------------------------------|
| Ozone          | Copiers; laser printers; air    | OSHA 8 hr 0.1 ppm             |
|                | ionizers                        | OSHA 15 min 0.3 ppm           |
|                |                                 |                               |
| Organic Vapors | Paints, solvents, disinfectants | OSHA 8 hr 100 ppm -150 ppm    |
|                | and plastics                    | OSHA 15 min 150 ppm - 200 ppm |
| Asbestos       | Insulation; ceiling and floor   | OSHA 8 hr 0.1 fiber per cubic |
|                | tiles;                          | centimeter                    |
| Dusts          | Various                         | OSHA 8 hr 10 milligrams per   |
|                |                                 | cubic meter                   |
| Carbon Dioxide | Bioeffluents; poor HVAC         | OSHA 8 hr 5,000 ppm           |
|                | operation.                      | OSHA 15 min 30,000 ppm        |

## **APPENDIX C**

QUESTIONNAIRE Indoor Air Quality

Occupant Name:\_\_\_\_\_

Today's Date:\_\_\_\_\_

Room Number:\_\_\_\_\_

Building Name:\_\_\_\_\_

Time/Hours Worked Today:\_\_\_\_\_

#### Symptom Patterns

- 1. What kind of symptoms or discomfort are you experiencing?
- 2. Are you aware of other people with similar symptoms or concerns? Yes\_\_\_ No\_\_\_
- 3. Do you have any health conditions that may make you particularly susceptible to environmental problems?

## **Timing Patterns**

- 1. When did your symptoms start?
- 2. When are they generally worst?
- 3. Do they go away? If so, when?
- 4. Have you noticed any other events (such as weather conditions, temperature or humidity changes, or activities in the building) that tend to occur around the same time as your symptoms?

#### **Spatial Patterns**

- 1. Where are you when you experience symptoms or discomfort?
- 2. Where do you spend most of your time in the building?
